Experience

DEC 2022 - SEP 2023

Backend developer at Uniplato, Perth

Uniplato is the technical team behind coffee.xyz. It is based in Perth, Western Australia.

- Developed and set up Stripe integration for payment and subscription management
- Worked on an SFU system based on webrtc (Mediasoup) and improved meeting recording
- Developed variant crud APIs
- Developed and maintained calendar integration with Google and Outlook
- Developed Calendar recurrence logic based on RRULE standards
- Worked on notification and email services
- Migrated 180k lines of codes to ESM
- Worked with Redis pub-sub and queues

2021 - Present

Open-source contributor

Open-source will always be a part of what I do, Here are some of the projects I have worked on throughout the last few years.

- Dafsa-Visualizer is designed to facilitate comprehension of Trie and DAWG graphs for visual learners, generating graphical representations from user input
- Node-rjdl is an Npm package developed to download media from RadioJavan (A famous Persian streaming platform)
- Monopay is an Npm package aimed at streamlining online payment integration with Iranian banks, offering a simple interface for developers.
